Each line is for a different plate (1-10) and each cell is for a different time stamp. For example line 1 has the following 1,12/11/2014 07:44:52:000,row1,column1,column2,column3,column4,column5 2,12/11/2014 07:45:53:000,row2,column1,column2,column3,column4,column5 3,12/11/2014 07:46:54:000,row3,column1,column2,column3,column4,column5 4,12/11/2014 07:47:55:000,row4,column1,column2,column3,column4,column5 and so on. My task is to get this data and and sum it all for each time stamp, to make a new csv file with the 5 columns. How can I do this in Python? Thank you A: import pandas as pd df = pd.read_excel("yourxls.xls", sheet_name=0) print(df.sum(1)) Q: What is expected of a moderator to do when there is no action to take In this meta.stackoverflow question Which users shall moderators ban? it states that moderators may not take any action, the action of the community is enough. However as a moderator of Arqade I am often informed that the community is not doing enough to remove offensive/inappropriate/spam posts from the site.
