

Best Answer: Hilarious, but I wouldn't take it as a direct suggestion of, "You are dumb." More like, "You are way too slow to get what I am saying." It's trying to push the envelope, and therefore the boundaries of their characters, which makes it funny. I do feel as though I'm slightly mocking the character, though, not the person, but it's hard to say without the video. Semiologia Del Aparato Locomotor Celsus Pdf 40

df7c4f5a2 Semiologia Del Aparato Locomotor Celsus Pdf 411. Field of the Invention The present invention relates to a structure of a lens barrel that has a reduction gear mechanism. 2. Description of the Related Art In recent years, there has been an increasing demand for smaller and lighter cameras. The camera body is required to be smaller and lighter, for example, and the lens barrel is also required to be smaller and lighter. In the lens barrel, in order to effectively reduce the size of the lens barrel, a structure of a lens frame or the like has been used in which the diameter of the lens frame is reduced in order to reduce the size of the lens barrel. Japanese Patent Laid-Open No. 2006-164324 discloses an optical system using an articulated supporting structure of a lens holder, a driving unit, a detecting unit, a driving unit, etc. The optical system is designed such that a pivotable lens frame having a reduced diameter is held by the driving unit (driving and detecting unit) in an open state. After the camera is mounted on the lens barrel, the pivotable lens frame is closed. The pivotable lens frame is closed by engaging the driving unit with the detecting unit, and the support states of the pivotable lens frame and the driving unit are fixed with the engagement. In the structure of the articulated supporting structure disclosed in Japanese Patent Laid-Open No. 2006-164324, the lens frame is closed after the camera is mounted on the lens barrel. Accordingly, there is no need for a space inside the camera body to be opened and closed or the like. In addition, the lens frame needs to be moved only once from an open state to a closed state. Accordingly, the size of the camera may be reduced. The lens barrel disclosed in Japanese Patent Laid-Open No. 2006-164324 is designed such that the pivotable lens frame with the reduced diameter is held in the open state by the driving unit in order to reduce the size of the lens barrel. When the reduction gear mechanism is to be disposed inside the lens barrel, since the diameter of the lens frame with the reduced diameter of the reduction gear mechanism is large, a space inside the lens barrel becomes large. In addition, it is necessary to suppress the increase in the size of the lens barrel in the state of being held in the open state. Fun Ways to make Money with a Dog Whenever 3c33713323
