Field of the Invention The present invention relates to a backlight unit for performing a light-emitting operation by utilizing fluorescent tubes as light sources and, more particularly, to a backlight unit for use in liquid crystal displays (LCD) or liquid crystal televisions. 2. Description of the Prior Art In recent years, a backlight unit in which a plurality of fluorescent tubes have been arranged has been used in an LCD television or the like. In general, the fluorescent tubes used as the light sources of the backlight unit have been of a direct type, which are directly disposed behind a liquid crystal panel, and an indirect type, which are disposed behind a diffusion plate so that light is reflected by the diffusion plate before being provided to the liquid crystal panel. A liquid crystal television of a large size, which has been now the mainstream of the liquid crystal television, uses a backlight unit of a direct type in which the number of fluorescent tubes is about six, typically. On the other hand, in a liquid crystal television of a small size, which has been often seen in the market, a backlight unit of an indirect type has come to be used in which the number of fluorescent tubes is about three. FIG. 1 shows a schematic arrangement of a backlight unit of a direct type for use in a large liquid crystal television. As shown in FIG. 1, a backlight unit 10 of a direct type includes six fluorescent tubes 2a to 2f, and a diffusing plate 4 for diffusing light emitted from the fluorescent tubes 2a to 2f. The fluorescent tubes 2a to 2f are disposed on a rectangular frame 6. An example of the arrangement of such a backlight unit of a direct type will be explained hereinafter with reference to FIG. 2. FIG. 2 is a schematic front view of the backlight unit of a direct type, and shows positions of the fluorescent tubes 2a to 2f with respect to a screen 1. Each of the fluorescent tubes 2a to 2f is provided with a fluorescent lamp (not shown) at a lower portion thereof. As shown in FIG. 2, the plurality of fluorescent tubes 2a to 2f is arranged at the corners of the screen 1 in a matrix pattern
