Overview of AutoCAD AutoCAD is a commercial, desktop application used for creating 2D and 3D drawings. As of the 2019 release, the current version is AutoCAD 2020. Users can work in 2D, 3D, or both simultaneously. The majority of drawings made with AutoCAD are in the 2D or 2.5D style. Users can create 2D drawings in 2D or 3D modes. They can also combine objects, dimensions, and styles from 2D and 3D drawings. Users can work within and export 2D drawings to PDF, DWG, DWF, DFX, EPS, and other formats. They can also import 2D drawings into AutoCAD. In addition, AutoCAD supports many languages, including English, French, German, Japanese, Polish, Portuguese, Russian, and Spanish. Users can also import or export to and from Microsoft Word and Excel. New features, including 3D shapes, tables, layers, and annotative text, have been added to AutoCAD since its previous major release. In addition, AutoCAD is connected to other applications, such as Autodesk Fusion 360, Autodesk Plant 3D, and Autodesk TinkerCAD. Advantages of AutoCAD According to the company, AutoCAD is "a fast, reliable, easy-to-learn and easy-to-use [desktop] CAD application that is intuitive and powerful enough to meet the design and drafting needs of today's global workplace."

It can be used by professionals and new users. Core Data is a collection of Application Programming Interfaces (APIs) and tools used to develop embedded software for AutoCAD. History AutoCAD was first released in 1992 as a personal computer application and was written in AutoLISP. AutoLISP was a programming language similar to BASIC and was later replaced by Visual LISP. AutoCAD's first commercial version (AutoCAD 2000) was not delivered as a LISP program. The first one to be delivered was AutoCAD 200, which was delivered as a Visual LISP program. This application had a completely rewritten user interface. Later versions of

AutoCAD switched to an object-oriented architecture and with the release of AutoCAD 2011, the AutoLISP programming language is no longer supported. AutoLISP is an object-oriented programming language that was developed by Autodesk and released as the foundation for AutoCAD's programming language. The original AutoLISP was first available for Windows version 3.0, but was ported for Windows 95. It was used for all previous versions of AutoCAD. However, after AutoCAD 2000, version 2.5, the AutoLISP programming language was retired, and a completely rewritten codebase was developed. A goal was to replace the codebase with C++, and the move was completed by the release of AutoCAD 2013. AutoLISP is still available to use in Autodesk Revit, where the interface elements (dialogs and windows) are written in it. Visual LISP is an object-oriented programming language that was developed for AutoCAD version 2.0. It was written as an object-oriented alternative to AutoLISP and was developed with the goal of making AutoCAD easier to use and more intuitive. Visual LISP is still available in Autodesk Revit, where the interface elements (dialogs and windows) are written in it. Classic GUI, sometimes referred to as the old graphical user interface, was the original graphical user interface of AutoCAD. AutoCAD's first release, AutoCAD 200, was written entirely in AutoLISP, and Classic GUI was only available in the codebase. Classic GUI had a completely rewritten user interface in AutoCAD 2010. However, AutoCAD Classic GUI (version 1. ca3bfb1094

The funeral committee and city can allocate the funds and hire staff, and in the case of the Road Club, the city can partner with the club to do community outreach. Finally, funeral plans are available from four funeral homes. The boroughs have contracts with these homes and pay them to provide the end-of-life care. Funeral homes can be cheaper than city-run facilities. But there are fewer funeral homes, so families may have to drive a long distance for funerals, which can be very expensive, depending on the size of the family. The mayor asked the council to fund any emergency plan. Funerals have traditionally been handled at the local level. We've always had a service and a burial. But now, it's part of our code of conduct. And it's part of government. I also think that the city should have in place a clear plan for the loss of a member. It's important that when a borough is losing its firefighter or a police officer, that there's a structured plan for notifying people. The borough and the fire and police unions should be partners in creating these plans. I want to thank the council for the workshop on these issues. The second item of business: we have a few items of business, all of which are funded. We have the president of the borough council's budget recommendations. [Floor conversation] The next item is the election of an elected official in the 50th Assembly District. [Floor conversation] [Floor discussion] The fourth item is the approval of the January 4, 2019, and January 18, 2019, sewer work orders. [Floor conversation] All in favor. The borough will add a storm sewer. It's a two-inch storm sewer from Bogert and State Road to the Mill Creek and the sand pit. [Floor discussion] The next item is the renewal of the 2017-19 school district building plans and bids. The deputy mayor and I are requesting the borough council to approve the renewal of the 2017-19 school district building plans and bids. We have one firm bid of \$63,000, and another from another firm of \$76,000. The borough has not received bids from
