AutoCAD is a product of Autodesk, a California-based software company that develops and markets a wide range of computer-aided design and computer-aided manufacturing software products and technologies. The AutoCAD product line includes AutoCAD and other AutoCAD-related software products, such as AutoCAD LT, Grasshopper and Accel AutoCAD. Autodesk's AutoCAD product line was launched in 1987 and, since then, has sold more than 35 million units around the world. In March 2016, Autodesk acquired the SketchUp software application for the commercial market. At the time of the acquisition, SketchUp was a top-10 software application with 2 million registered users in 120 countries. In 2016, Autodesk introduced a new standard licensing model for AutoCAD and AutoCAD LT with a per-seat price starting at just \$3,000. In addition to AutoCAD, AutoCAD LT and Design Review apps, Autodesk also offers software products and services for architecture, mechanical design, construction, civil engineering, landscape architecture, and interior design.

Autodesk's history In the 1980s, Autodesk was a pioneer in CAD software for personal computers and PDA (Personal Digital Assistant) handheld devices. In 1987, the company introduced the first commercial CAD software for personal computers, named AutoCAD. Developed on the Digital Equipment Corporation (DEC) PDP-11 architecture running on a non-IBM PC operating system, AutoCAD ran as a standalone app on one or more display monitors, and allowed users to draw 2D and 3D drawings on screen, in a non-graphical user interface. For the first time, CAD operators could collaborate over a network, share drawings and exchange files with each other in real time. AutoCAD 1.0, released in December 1982, included: Design and drawing tools Vector tools 2D drafting tools Drafting rules and constraints The first major AutoCAD feature was the ability to view 3D models. In 1992, a client could view the model using the first 3D browser, which viewed and navigated a 3D scene. 3D image files could be exchanged using the FITS file format. ObjectARX was used to create a DLL that was used by Visual LISP applications for control of the drawing commands. Visual LISP applications were the most common way to customize AutoCAD until third-party DLLs were released. Visual LISP is a scripting language, which allows users to automate commands. AutoCAD has a C++ library for scripting called ObjectARX. AutoLISP and Visual LISP, which are languages based on Visual Basic, are also used for scripting. Visual LISP is a programming language and a type of scripting language based on Visual Basic and Visual C#. When the company bought Digital Carpentry (popular for AutoCAD's scripting) in 2003, the decision was made to rewrite most of the AutoLISP code. They chose to use C++ over Visual LISP to avoid conflicts with AutoCAD's ObjectARX. AutoLISP is a programming language based on AutoCAD. It is based on the same syntax and code as AutoCAD's LISP, but also includes a number of functions and commands that are not present in AutoCAD's LISP. Legacy AutoLISP and Visual LISP scripts and code still exist and are available for download from the Autodesk Exchange Apps store. Extension Warehouse Autodesk Exchange Apps store contains third-party AutoCAD extension products. These include drawing templates, visual aids, and products that are released outside of Autodesk Exchange Apps. As Autodesk does not have a subscription system, these products are freely available. Criticism Autodesk Exchange Apps provides a curated software experience on the Windows Store, and only adds the most popular products to the store. Open the file main.ini and edit the key in the [Settings] section. Change the [full_stop] and [unicode] key. For the full_stop key set value: [Settings] full_stop = false unicode = true Make sure you have un-tick the 'do not change' [Locked] key. Close the file main.ini. Make sure you have Windows Automatic updates turned on, you do this in the control panel. Reboot the computer and it should change the key after restart. Note that the key you create is not the same as the key that you use in your solution, just a new key. The new key you create should allow you to use the following key in your solution: [Settings] full_stop=false unicode=true Locked=false Then you need to convert the key in your solution to the above keys. Unlock the file main.ini, then edit the key that is above the [Settings] section. Change the [full_stop] and [unicode] key to the values you created in step 4 above. Save the file and close the file main.ini. Make sure you reboot the computer. I have tested this on both Windows 7 and Windows 8. Hope this helps.
