Ubiquitin-like small ubiquitin modifiers (SUMOs) are covalently attached to proteins in an ATP-dependent manner. The SUMO pathway is conserved from yeast to mammals. Rad6 is a phosphorylated ubiquitin (pUb)-conjugating enzyme that is essential in various processes, including cell cycle progression and DNA damage response. In this study, we identified yeast Rad6-interacting protein (Rip1) as a SUMO E2-conjugating enzyme, and characterized its role in the SUMO system. We found that Rumi1 (a functional homolog of Rip1 in S. pombe) has E2-like activity with SUMO2 and the E3 ligase activity of Rad6. We also demonstrated that Rumi1 and Rad6 form a complex with Siz1 (a catalytic subunit of the Sin3 complex) and Mms21 (a SUMO-targeted ubiquitin ligase), which play a crucial role in the SUMO pathway. Mutations in rumi1 and siz1 result in growth defects at 37 °C in the presence of a high temperature condition. Thus, the Rumi1-Siz1-Mms21 complex appears to be essential in the SUMO pathway.San Anselmo Middle San Anselmo Middle School (formerly San Anselmo Central School) is a comprehensive community middle school located in San Anselmo, California, United States.
