The feedback will allow us to integrate a new set of player animations into the game, which will significantly increase the amount of control the players have in the action. Hyper Motion Technology is a feature players will notice from the first day that they pick up the game, and new animations developed specifically for the feature will add to the feel and authenticity of the player movements. We would like to thank the real-life football stars who have volunteered to participate in the game motion capture process, and to express our gratitude for the time and effort they have put into ensuring that FIFA 22 is the best FIFA experience yet. Another significant feature of FIFA 22, free for all players, is the introduction of more realistic celebrations. These new celebrations will be triggered automatically based on events during the game and may be accompanied with any of the new animations, including diving, headbutting and of course, goal celebrations. These features are complemented by further improvements to the ball flight physics on the new pitch surfaces, as well as ground-breaking improvements to both the responsive player controls and passing mechanics. In FIFA 21, the goalkeeper's view was increased when he received the ball by breaking free from his dead-ball trap, but this feature was not completely intuitive, not to mention at times it could not be viewed at all. With FIFA 22, the goalkeeper's view will be unaffected at all times by the surrounding environment, which should now be possible to see at any time from any player on the pitch. FIFA 22 will also see the introduction of expanded FUT Champions content, providing more ways to enhance your overall gameplay experience. I played FIFA 20 on Xbox One and I definitely noticed an improvement and it was noticeable on PS4 as well. I think it also plays much better than FIFA 18. I played FIFA 22 on Xbox One and PS4 and it was overall better than the older one but it was obviously still not perfect. I think we will have the best FIFA on Xbox One this year. I hope other players feel this way too. I just could not see a difference between the last two FIFA titles on Xbox One and PS4. The ball felt a bit more fluid, it seemed more natural for me. —Erik Rinne I played FIFA 18 on Xbox One and on PS4, I was in love with the game the moment I started playing it. The visuals were stunning and the new physics engine made
