## Asalat Crack + Product Key Full For PC [Latest]

1) The main window is divided into two main parts. The left one is for the showing the user's current location and the Qiblah direction and the other one displays the details of the current prayer. The upper part of the left window contains the information of the user's country and city. The lower part of the left window shows the time (local and UTC) and the alarm time for the next prayer. The right window displays the time difference between the current time and the alarm time for the next prayer. 2) When the program is launched, the main window displays the current prayer time and the Qiblah direction. In order to select the right direction, it is necessary to click on one of the four direction markers displayed in the lower left window. When the direction is selected, the upper part of the main window will be replaced by the new data regarding the selected direction. 3) If the user clicks on the button "Display prayer time" in the upper right part of the main window, a new window will be displayed. This window shows the details of the prayer time. The user can change the prayer time or set the alarm time for the next prayer by clicking on the buttons "Set prayer time" and "Set alarm time", respectively. 4) When the user presses the exit button, the program exits.

Asalat Free Download Tools: 1) The calendar tool is a useful utility that allows you to convert any date between Gregorian and Julian calendar systems. Clicking on the "Click here" button displays a popup window with the help of which you can copy or move any date between these two systems. 2) The astronomical tool is used to know the date of the new Moon and the solar and lunar eclipses. 3) The "Date converter" tool is used to convert the Julian and Gregorian calendar dates to the solar (ephemeris) and lunar (lunar nodes) calendar dates.

Asalat Options: 1) Clicking on the "Options" button displays the Options window. 2) In the country section, the user can select the country and its capital from a list of countries. The user can also set the abbreviations of the country's names. 3) In the city section, the user can select the city and its capital from a list of cities. 4) Clicking on the button "Pref
