Philip makes some good points about losing functionality, even in the final version. I did experience those issues too **and can vouch for how easy it was to switch back to the regular Photoshop**. Mobile Photoshop CC is a little behind the times . **The latest Photoshop CC 2016 features are pretty bare bones and mostly consistent with previous Photoshop releases. It'd be interesting to see Adobe introduce these features to mobile users in an update and see if Photoshop can begin to progress past the feature-complete release it is today.** I think a lot of photographers will be jumping on this as soon as it's released. Some of the features, like auto exposure, are so basic and easy to do that I doubt I'm missing anything. However, sitting back and enjoying the power I get is going to be the most enjoyable part for me. For those that want to be more creative, like sketching, managing layers, and other things, it's rather lacking, so don't bother. I think that it's difficult to create a new apps, which is what the pro designers are doing, and rely on the existing Photoshop UI to provide the functionality. I also think that Photoshop has a better chance of surviving if it focuses on itself rather than trying to be a complete solution for every workflow. For professional who've been on Photoshop for a while, there's probably nirvana in this app. However, I'd need to see more advanced features like layers, user-specific presets, and layer masks before migrating to CC. I'm also wondering about non-Photoshop applications, like After Effects, Photoshop Plugins, and anything else that's designed for expressing yourself in Photoshop. It's going to be a battle keeping Photoshop updated as updates do happen to the app, but overall, I'm happy. Photoshop is finished and on its way to mobile.
