Let's start with the main feature of the app; it's the canvas. Rendered artboards can be transferred from Photoshop, rendering a multi-user

experience similar to a desktop environment. Also, the lighting is designed to help you create realistic and appealing images; it also includes features that let you easily tweak exposure and contrast. You can also duplicate artboards and customize them as you would on a computer. You can copy, paste, zoom, rotate and pan pressure. But what makes this app unique is that it supports Adobe's "copy" function. Instead of creating a new artboard from the Duplicate function, click on the Duplicate To Clipboard arrow button in the Artboard tool and it will create a new artboard and save it to the clipboard, allowing you to paste in a different place. Using this tool makes it much easier for you to work outside of the app. The app also includes workspaces, a feature found in most photo apps, and allows you to work on a two-page or three-page layout. For example, you could create the entire canvas on one page and work on a second and then a final page. You can create a new photo from scratch or take another image, and you can also work with photos on the iOS device directly without opening them in Photoshop. In addition, you can edit photos and even add text on a photo. It's also easy to import photos from iPhoto and Google Photos. But you should know that this is only a limited feature and things like exposing the image and brightness are missing. Also, printing is different.

But the next section is the color panel. One of the more exciting things for users and developers is the new Image Editor v1 software feature, which is directly mapped to the phone or tablet and allows its use, unlike the web version, to save and preview images or parts of images from the website.
