When it comes to photo editing, it's hard to beat the options in Photoshop. There are apps to help you edit, print and more. The computer software was originally only for professionals, but as the accessibility of it grew it gained more users. While you can still remove comments, the update also adds a negative feedback survey on your comment page. You'll get an email, too, if your comment is denied. Adobe's commenting system is designed to make sure you can share comments responsibly with your friends, colleagues, and the world. As years pass, I'm impressed by the breadth and depth of Adobe's design technology. From its browser, which I can now only mention because all my browsers are blocked by a security program, to its graphics engine, there are more refinements to the graphic pipeline than I ever imagined—and some of them are even hyper-realistic. Look closely at the materials in the Apple preview video shown above and you'll see that its movies are a superspecialist in quality. Without spoilers, the transition between the stills is seamless, and the model's skin looks out of this world. The only way it could look better is if it were real. (Adobe sounds the warning that it's not a real product, just yet. It makes it sound like I'm cheating, so I'm not going to name it. The main reason? It's hard to produce the results you need in as little time as (or as little as) you'd like it to take. Why? Often, you'll have to resize an image, retouch (or allow programs like Photoshop to do it for you), fix color/white balance, do some minor sharpening or unsharp masking (including the option to decide what you want to keep feeling and what you want to change, and the result is a great-looking image that loads quicker and uses much less time. Whether you are designing a logo, advertising a product, or creating an illustration, you probably have an idea of what you want the final product to look like. You'll be more satisfied with the end result the more time you put into your editing. And in my experience, editing large, complex images is no joke. Whether you are designing a logo,

You'll be more satisfied with the end result the more time you put into your editing.
