Sure, you can use a keyboard to go back and adjust some attributes of the image after the fact, but I feel that it's also possible and more efficient to manipulate an image right from the touchscreen. I am talking about the undo/redo function and things like that. Using the iPad Pro with a real keyboard feels like using an antique, heavy and clumsy tool. I am not a graphical designer, so my experience in using Adobe's products is limited to a perfunctory inspection of how the interface works and how things are organized and organized. However, what I love about the new Photoshop interface is how intuitive it feels to use it. From my perspective, the redesigned tool bar is very intuitive. I can't remember the last time I accidentally hit the wrong button by tapping it inadvertently. Auto save is also worth mentioning. It doesn't always happen the way you want it to, but it is quite a clever change. It should be noted though, that at the moment, Digital Photo Professional (DPP) does not feel as intuitive as it should. But that's more of an issue for another day. The new features of Photoshop are impressive. Digital Scrapbook looks to be a very interesting feature. I am not a particularly good designer, so I can't tell you how useful it will be to me. That said, some features like Layer Navigator, which has been improved, can be quite helpful.
