“* The feature that allows you to quickly preview or edit a series of images in an iPhoto-style library is limited to a single camera connection. It is not supported on camera connections using digital alert service (DAS) or Android photo/video. So it looks like it’s not even meant for that. I’m not even sure that the feature is faster on iPad than on a full computer. It seemed to work just as quickly on my early 2012 Macbook and Parallels 12.1 as on my 2015 iPad Air 2. Maybe there’s some hidden speed advantage to the way these features are implemented, but it doesn’t feel like it. It also doesn’t seem to recognize the iPad Pro as a smart phone, rather than as a tablet. Opening JPEGs from the library through the Facebook Wire allows you to edit them, but they seem to have to be open before they can be edited. Preview mode for Photoshop Pro includes tools that help you modify a single canvas, layer, or adjustment, even if the active document contains more than one image or adjustment. Use Smart Sharpen to automatically produce a more-realistic looking, smoothed-up version of an image you’re working on, using, for example, the default sharp filter presets or your own in-depth sharpening settings. Clone Stamp lets you retouch areas of an image in more dramatic ways using the exact same brush to magically erase a blemish or bring back missing or sunken skin, or even restore missing facial features using more advanced techniques in the Clone tool. Paint 3D is an offline feature that lets you sculpt and morph your selections into 3D models. You can then animate, pose, and customize the 3D objects in your image. Once a 3D model is finished, you can use the new Tools for 3D to composite the model as a full-color or black and white matte painting element and apply it to a new layer. Or you can blend the 3D model into the Photo where you see it. Additionally, you can send your 3D models to the 3D Warehouse for sharing and preservation via the same Share for Review mechanism.
