When you're creating amazing designs, it can get very overwhelming. With the variety of options available, it can be challenging to figure out which one is going to work best for what you're trying to create. Because of that, we've come up with a few of the best blends for you to get you started. While there are a plethora of sophisticated blending options available in Photoshop, knowing how to use them to maximize the results of your designs is the key to forming powerful images. A neat thing about this blend is that it allows you, in just a couple of steps, to create an awesome effect that will reflect on your photos. Uplight: This is easier than it sounds. You basically need to apply the base pass, in this case, the shade channel. Then create a new brush in the foreground using the Sponge options. Then, get out the Glow capabilities and set the settings as you like. To round off the rellish, you can apply a stroke in a few more steps. This documents all the steps you'll need to take. The Blend-o-Matic effect really is the most user-friendly way to accomplish this style as well. Simply go to the blend options and follow the steps to get this style. A selection tool lets you make multiple selections. From there, you can refine your selection, switch back and forth between them, and export them as a group of new layers. The Erase tool is similar in functionality to Photoshop's Clone Stamp. You can use it to clear out large areas of your photo and keep the surrounding areas. You can also apply effects to pixels and remove them from specific areas. e3d0a04c9c
